DETAILED ACTION

Election/Restrictions

1. The claims have been rejoined in light of applicant's arguments.

Specification

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tsai (US 5,982,735). Tsai discloses a disc drive for driving a disc shaped recording medium. Figure 1 of Tsai shows the drive includes base 10 made of a single flat plate that is rectangular in shape. Figure 1 also shows disc rotation driving mechanism 11 disposed on the base for rotating a disc shaped recording medium. Figure 1 of Tsai additionally shows recording and/or reading mechanism 20 disposed on the base for recording data on and/or reading data from the medium. Figure 1 of Tsai further shows guide mechanism 30/40 disposed on the base for movably supporting mechanism 20 between inner and outer circumferences of the medium,

Application/Control Number: 09/585,870

Art Unit: 2652

Figures 1 and 2 of Tsai show a feeding mechanism 14-17 disposed on base 10. Four receiving post portions 18, which include elastic members, for base 10 are disposed symmetrically on base 10 with respect to a center line of the base along the direction of movement of the recording and/or reproducing mechanism 20. Figure 2 of Tsai also shows mechanism 11, 20, and the feeding mechanism 14-17 located on base 10 such that a center of gravity of base 10 lies along the center line.

Note: with respect to the reference plane of claim 6, for example, it has not been defined.

Therefore, a reference plane at an angle through base 10 meets the claimed limitations.

Tsai is silent as to base 10, which is a single plate, being made of metal with thickness between 1.4 mm and 1.8 mm. Tsai is also silent as to a pivotal support member moving towards and away from a tray.

Official notice is taken of the fact that single metal plates and pivotable support members in disk drives are notoriously old and well known in the art.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to form, which is well within the purview of a skilled artisan and absent an unobvious result, the single plate of Tsai with metal as suggested in the art. The rationale is as follows: one of ordinary skill in the art at the time the invention was made would have been motivated to form a single plate from metal because it can be melted or fused, hammered into thin sheets while maintaining strength.

It also would have been obvious to a person having ordinary skill in the art at the time the invention was made to provide the drive of Tsai with a pivotable support as suggested in the art.

The rationale is as follows: one of ordinary skill in the art at the time the invention was made

Art Unit: 2652

Page 4

would have been motivated to provide a pivotable support so as to move the base, which carries the head, disk and turntable, to and from the tray thereby allowing the disk to be chucked and ejecting from the disk drive.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David D. Davis whose telephone number is (703) 308-1503. The examiner can normally be reached on Monday thru Friday between 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hoa T. Nguyen can be reached on (703) 305-9687. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
